Jumeirah Group Web Based Applications

- **festivefunderland.com restaurant booking system** : application used for promoting outlets in Jumeriah restaurant group and booking. **Front-end made with HTML5, CSS3, Bootstrap4, JavaScript, jQuery. Back-End server using with php7, php oop, mysql**
- **IT Inventory Management System:** application will work internal, basically application for using maintaining IT devices, users, hardware and software. **Application used codeigniter php framework. Front-End used: HTML5, CSS3, Bootstrap4, MaterialDesign, Back-End server side user php-codeigniter 3, mysql, ajax**

Caesars Bluewaters Web Based Applications

- **Caesars IT Inventory Management System:** This application web based and will work only internal. System will manage inventory of IT products, active, not active users, phones, phone numbers, hardware and software. Application will save a lot of time and save a lot of paper wastage. System has type of user panels, it will search registered items by type, by location and it is very easy find out items and manage. **Application developed with codeigniter php framework, front-end used HTML5, CSS3 , Bootstrap4, Bootstrap MDB. Bac-end server side used with codeigniter php, ajax, mysql.**
- **Caesars Vouchers System:** Application web based system and will work only internal. Caesars Voucher system will create voucher and will redeem voucher. Once redeem voucher system will send email to the guest about redeemed voucher then for confirmation system able to create invoice and can print as well, there smart features developed once user created new voucher that voucher will appear under user name then it will give notification, user once click redeem voucher, it will not be revert back because system will send email to the guest. This application created because of there is company used different voucher system, but there guest can use that voucher with friends, and colleagues not able to find by paper and it was very difficult find out with Caesars voucher system you will search voucher code and user easy to confirm that voucher used or not. **Application developed with Laravel 5.8 framework. Front-End used HTML5, CSS3, Bootstrap4, MaterialDesign, JavaScript, jQuery, Back-end server side used Laravel framework, ajax, jquery, mysql, homestead, Ubuntu 18.04.3.**
- **Caesars IT Checklist system:** Application web based, system will work only internal, Application will make easy operation and will remind IT Department daily checklists need to be done, checklist will remind what need to check software and hardware daily , monthly and yearly and it will send email to group email. Project still ongoing, **Checklist system developing with Laravel 5.8, used for Front-end Bootstrap4, Bootstrap MDB, Material Design, HTML5, CSS3, JavaScript, jQuery. Back-end server side using Laravel 5.8 framework, mysql, ajax, mysql server workbench, apache server**
